Re: Annual Reevaluation of Incidents and Camera Locations for 2022

On January 9th, 2023 the annual reevaluation of incidents and camera locations was completed pursuant to CALEA Standard 91.1.8(a), Standard 91.1.8(f) and General Order 12.6.2 – Camera Locations, which states: Technical Services will conduct an annual evaluation of the camera locations and the incidents that have occurred. A recommendation for changes will be included in the annual inspection report.

Major accomplishments during this review period

In 2022, the police department utilized funds received in 2021 to maintain the university camera system. Due to limited funding because of the state and university budgets the PD took a maintenance approach to fix cameras that are down and to be particular with new installations.

Other Technical Services camera projects completed in 2022-

- Mossman Building
  - 2 new cameras in main entry area
- Moran Commons
  - 3 new cameras added to kitchen area.
- UNCG Admissions building
  - 1 new camera on west side of building looking at parking lot
- Stone Building
  - 5 cameras added to Animal Clinic area.

Evaluation of the camera locations and incidents that have occurred

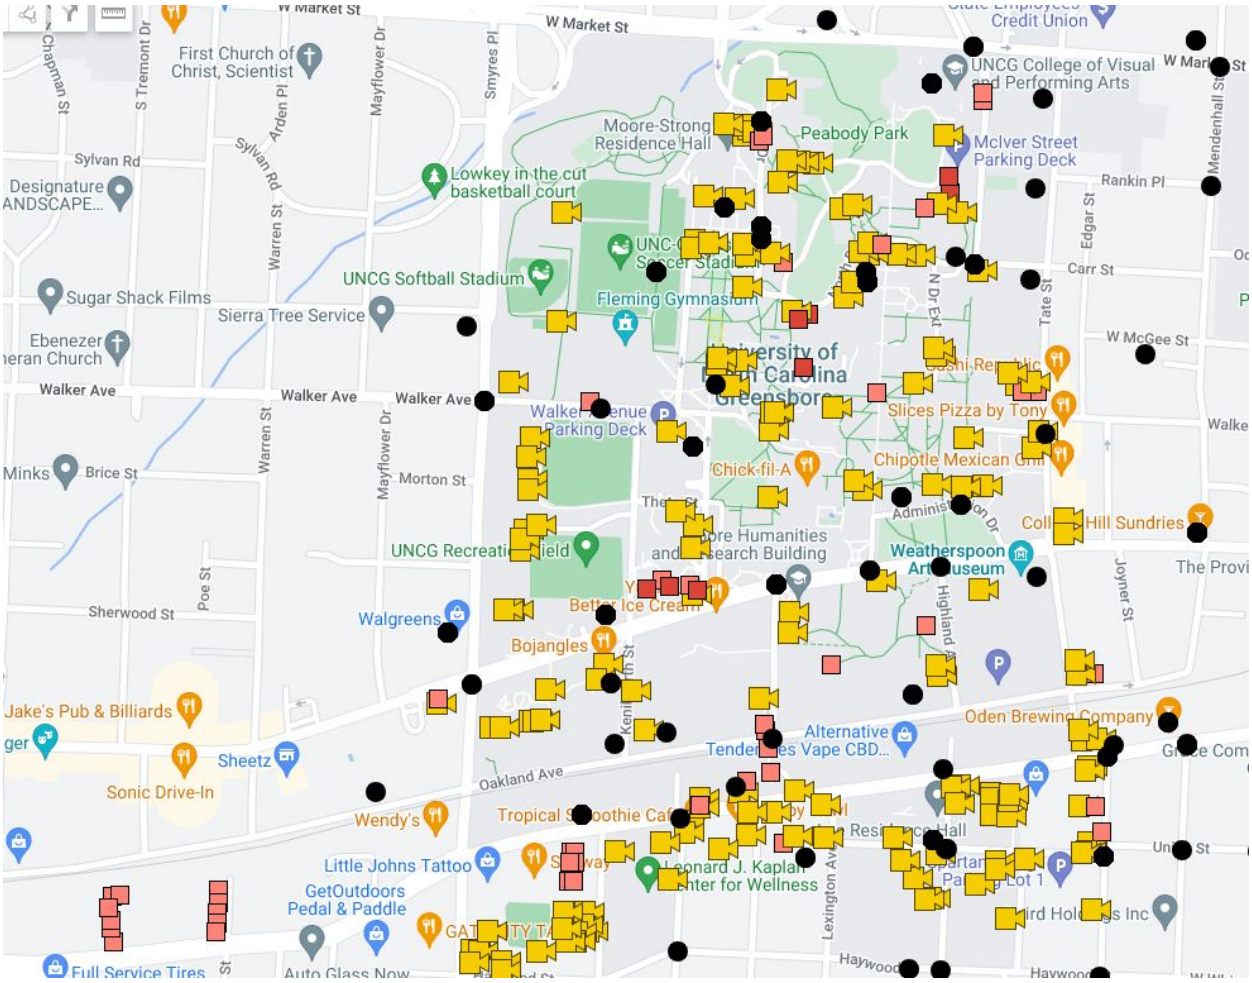
Pictured below is a representation of crimes reported to UNC Greensboro Police Department from Jan 1, 2022, to December 31, 2022.

Camera Legend

Black- crimes reporting by UNCG Police and Greensboro PD

Yellow- PTZ camera location

Red Block – Fixed outdoor camera location



Based off this map it appears that we have good camera coverage where several of the incidents have occurred. Areas with inadequate camera coverage are Coleman Building (Athletics), Highland and Oakland Avenue, Josephine Boyd and Gate City Blvd intersection, and McIver and West Market Street. TSU worked with Dining Services, Parking and Housing and Residence Life and other departments to improve on areas where cameras were needed.

****It should be noted that Greensboro Police Department stopped uploading data April 2022 ****

2021 Camera Review Update

- Work needs to continue covering the entry/exit points into all buildings on campus
- Not all ITS labs have cameras
- No cameras are around the daycare centers (at least to monitor traffic/ who is coming and going from the buildings)
- TSU continues updating LPR cameras.
- TSU purchased PTZ cameras in February 2022 for the down cameras at that time (20), Unfortunately, the cameras were not received until November 2022 due to supply chain issues. During this time span additional cameras became inoperable thus leaving us with additional cameras to replace upon replacing the 20 from 2022.
- Inadequate camera coverage:
    - Coleman building – expense. Athletics does not want to allocate or does not have the funds to put toward cameras in the building.
    - Oakland Avenue – expense and getting data to locations. With the water chiller plant being completed we could possibly get data from that location out to Oakland have to have cameras look east and west, but again there is a cost to that.
    - Josephine Boyd and Gate City intersection- cost to the tune of $20,000 - $25,0000
    - McIver and West Market- We could replace the LPR facing north with a fixed camera to see that intersection a little better, but we lose obtaining vehicles leaving campus going north.

Recommendations for future changes

1. Add new IP cameras in areas identified by the evaluation of camera locations and incidents or by factors identified by the Technical Services Unit as a high priority such as:
    a. Major intersections in and around campus
    b. Entry/Exit points of academic buildings
    c. ITS labs
    d. Areas around the daycare centers on campus.
    e. Areas/buildings that hold large concentrations of people
    f. Pedestrian areas and walkways.

2. Integrate license plate reader cameras at the entry and exit points for vehicular traffic to the University.

3. Continually update camera client and server software.

4. **Funds will need to be allocated for replacing broken cameras. We currently have 53 cameras that are down. Out of this number 20 are PTZ's. Current price on CDW-G is $2,084.22 per unit ($41,684.40). TSU will be exploring a different option to replace these PTZ as supply issues still remain.**

The next annual review for the year 2023 is scheduled for January 2024.

CALEA 91.1.8.a, CALEA 91.1.8.f and Compliance
